SUMMARY

Recent graduate with a degree in computer science and a certificate in digital communications. Over a year working with API's as well as developing RESTful APIs, web animations, user-facing features and client-server architectures. Over 3 years working with web markup and developing websites from the ground-up, using bootstrap and CMS's such as WordPress. Looking for an opportunity to work in a challenging and collaborative environment that promote diversity and inclusivity. I excel in a fast-paced environment, have a passion for problem solving and I am very eager and willing to learn new technologies.

PROFESSIONAL SKILLS

- | | | |
|---------------------------------|-------------------|---------------------|
| ▶ Strong Problem-Solving Skills | ▶ REST API JSON | ▶ JavaScript |
| ▶ Strong Communication Skills | ▶ Bootstrap | ▶ HTML CSS ES6+ |
| ▶ UI/UX Development Git | ▶ NodeJS | ▶ React Hooks |
| ▶ React Redux | ▶ Express | ▶ TypeScript |

PROFESSIONAL EXPERIENCE

Front End Developer | Freelance | August 2020 – Present

Collaborated with clients to implement various designs and alterations to a Shopify or WordPress theme. Periodically scheduled meetings where the product was discussed, and any feedbacks made were noted and implemented before the next meeting occurred. Added custom JavaScript in certain areas to solve unique problems that could not be done through the theme. Found creative solutions to satisfy clients requests. Ensured that the websites were mobile friendly and accessible. Made sure their websites were accessible by following the WCAG and running tests using tools such as WAVE and Dyno Mapper.

Occasionally provided advice on the visual structure of the clients' website, making sure user experience was at the forefront of every design decision that was made. I also made design decisions based on the current trends and the information provided by google analytics which saw unique visitors increase by about 13% for one of the websites.

Developed multiple projects with client-server architectures and authentication that utilized fetch requests to deliver dynamic content to the front end of the website. Some of these include Spotify's Web API, Yelp's Fusion API, LocationIQ, Twitter, and the API's I have built. I made sure these projects were forward thinking by building reusable code through the help of React components, writing scalable and efficient code, and testing the UX and UI designs for technical feasibility.

EDUCATION

- **Bachelor's Degree** in Computer Science, University of Toronto, 2015 - 2020.
- **Certificate** in Digital Communications, Sheridan College, 2016 - 2020.
